NSW Clean Air Submission

Hi there,

I live in Bulli which is in the Illawarra with many Coal mines & open top coal trains running daily close to my home and family. I ask the NSW Government reduces the Air Quality industry limits to drive real pollution control. This would reduce the detrimental effect on the Public Health, especially for people like my family who are exposed to Coal Dust on a daily basis.

I am asking that the Government should simply adopt the World Health Organisations guidelines values for Air Quality. Is there a reason why this is not adopted? Is there economic influence from the Coal Industry or other?

I call for the NSW government to set Air Quality standards that safeguard the health of our population with no link to lobbying from industries that contribute to Air Pollution. I work in the Health industry and believe stronger Air Quality standards will benefit the people of NSW as well as the long term economic impacts facing the Health industry.

Regards,

Nadia Mannino
